NoteSwift for Amazing Charts

Release Notes. Updated (11/18/2014)

Version 1.0.0.42

What's new

- Support for Amazing Charts versions up to 7.1.3
- Added support in Social History for Former Smoker (pack years x years quit)
- Bug fixes
- Significant improvements to the user manual
    - Links from the NoteSwift Help menu to the manual and release notes, ensuring access to the latest information.
    - Updated information for ROS and Exam forms
    - Installation instructions moved to the manual

What's fixed

#627 – Social History: selecting Former Smoker for tobacco history now prompts for pack years/years quit, and transfers the data properly to the Social History pane in Amazing Charts.

#622 – Link to installation instructions in the installer dialog returns a 404 error – The installation instructions have now been incorporated into the manual.

#624 – ROS – "gynecological "was misspelled. It has been corrected.

#633 – Parentheses stripped out when transferring ROS and Exam data to the Amazing Charts. The parentheses used to delimit comments for associated findings were not being transferred to Amazing Charts, as well as being retrieved properly back into the ROS or Exam form. The parentheses are now preserved and properly transferred.

#627 – Changing the tobacco history from a previously entered history has an intermittent issue where the correct item Amazing Charts tobacco history dropdown may not be selected. The relevant data however, such as packs per day and years smoked will be updated. This has been resolved.

Known Problems:

#588 – If you bring up the NoteSwift ROS Template form and then say Cancel, the Amazing Charts ROS Template dialog is still displayed and must be manually dismissed. Related problems:

- #589 – Medications form, #590 – Prescribe form, #591 - Allergies form, #592 – Assessment Template form, #593 – Assessment Template form

#639 – ROS and Exam – data left in the Finding and Details fields will not be transferred if you say Done. The ROS and Exam forms only transfer data in the preview window. If there is finding / details data in the form, you should first say Next to transfer it to the preview window

#640 – Diagnosis Form – if you get an Amazing Charts warning, for example you are entering a diagnosis already in the problem list, NoteSwift will not dismiss the Diagnosis search window. You will have to dismiss the window manually if this occurs.

#642 – Social History form – if you enter a list of Items (categories) into the preview without any corresponding note, NoteSwift cannot correctly navigate the categories when you go back to add findings. However, a list of categories which are installed from a Social History template can be navigated properly. Dictating category / Note pairs also works and can be properly navigated by NoteSwift.
